

## AMENDMENTS TO THE CLAIMS

1. **(Currently Amended)** A command control device ~~for executing a command that corresponds to a display image selected by a user, comprising~~ comprising:

an input section ~~provided with~~ operable to provide an instruction determined by the based on an input received from a user;

an output section ~~for outputting~~ operable to output a display screen that presents various information to the user;

an image capture section ~~for capturing~~ operable to capture, from the display screen, a said display image that is to correspond ~~corresponding to a particular the command from said display screen~~;

a command control information generator ~~for generating~~ operable to generate command control information including information about ~~said the display image captured by said image capture section and the~~ particular command; ~~and~~

a command control information storage section ~~for storing said~~ operable to store the command control information;

a command presenter ~~for making~~ operable to cause said output section to present said the captured display image on the display screen ~~corresponding to said~~ based on the command control information stored in said command control information storage section so that the user can select, via said input section, the captured display image that corresponds to the particular command ~~to be executed~~; and

a command selector operable to execute the particular command[[,]] when the user selects ~~said~~ the captured display image ~~that presented by~~ said command presenter causes said output section to present based on the stored command control information presenter, for ~~executing the command corresponding to said display image according to said instruction provided by said input section.~~

**2. (Currently Amended)** The command control device according to claim 1, wherein said image capture section is operable to capture ~~captures~~ the image of an area selected by the user from said display screen according to ~~said~~ the instruction provided by said input section.

**3. (Original)** The command control device according to claim 1, wherein said image capture section automatically captures all or part of the display screen according to prescribed conditions while an application corresponding to the command is being executed.

**4. (Currently Amended)** The command control device according to claim 3, wherein ~~said~~ the prescribed conditions are determined based on either or both of the number of executions of the command and the number of execution frequencies of the command.

**5. (Currently Amended)** The command control device according to claim 1, wherein ~~said~~ the captured display image is a moving picture that varies with time.

**6. (Currently Amended)** The command control device according to claim 1, further comprising a communication section for connecting to the Internet, wherein

said command presenter ~~makes said~~ causes said output section to present the captured display image presented as a bookmark of an Internet browser for presenting information that is received and transmitted through said communication section.

**7. (Currently Amended)** The command control device according to claim 6, wherein ~~said~~ the captured display image is a moving picture that varies with time.

**8. (Currently Amended)** The command control device according to claim 6, wherein ~~said~~ the captured display image and a text list are both used as ~~said~~ the bookmark.

**9. (Currently Amended)** A command control method ~~for executing a command that corresponds to a display image selected by a user, comprising the steps of~~ comprising:

capturing, from a display screen, said a display image corresponding that is to correspond to a particular ~~the command from a display screen, wherein the display screen is used for~~ presenting ~~various~~ information to the user;

generating command control information including information about ~~said~~ the captured display image and the particular command;

presenting ~~said~~ the captured display image on the display screen corresponding to said  
based on the command control information so that the user can select the captured display image  
that corresponds to the particular command to be executed; and

executing the particular command[[,]] when the user selects ~~said~~ the captured display  
image presented in said presenting step ~~step~~, ~~the command corresponding to the display image~~.

**10. (Currently Amended)** The command control method according to claim 9, wherein  
said image capturing step comprises ~~the steps of~~:

selecting an image of an area desired by the user from ~~said~~ the display screen; and  
capturing ~~said~~ the selected image of the area.

**11. (Currently Amended)** The command control method according to claim 9, wherein  
said image capturing step comprises ~~a step of~~ automatically capturing all or part of the  
display screen according to prescribed conditions while an application corresponding to the  
command is being executed.

**12. (Currently Amended)** The command control method according to claim 11, wherein  
~~said~~ the prescribed conditions are determined based on either or both of the number of  
executions of the command and the number of execution frequencies of the command.

**13. (Currently Amended)** The command control method according to claim 9, wherein

~~said~~ the captured display image is a moving picture that varies with time.

**14. (Currently Amended)** The command control method according to claim 9, further comprising:

~~a step of~~ transmitting and receiving information by connecting to the Internet, wherein in said presenting step, ~~said~~ the captured display image is presented as a bookmark of an Internet browser for presenting ~~said~~ the information that is transmitted and received in said transmitting and receiving step.

**15. (Currently Amended)** The command control method according to claim 14, wherein ~~said~~ the captured display image is a moving picture that varies with time.

**16. (Currently Amended)** The command control method according to claim 14, wherein ~~said~~ the captured display image and a text list are both used as ~~said~~ the bookmark.

**17. (Currently Amended)** A computer-readable recording medium on which a program is recorded, said program ~~making~~ causing a command control device ~~for executing a command that corresponds to a display image selected by a user execute the steps of~~ to execute a method comprising:

capturing, from a display screen, said a display image corresponding that is to correspond to a particular ~~the command from said display screen,~~ wherein the display screen is used for presenting ~~various~~ information to the user;

generating command control information including information about ~~said~~ the captured display image and the particular command;

presenting ~~said~~ the captured display image on the display screen corresponding to ~~said~~ based on the command control information so that the user can select the captured display image that corresponds to the particular command ~~to be executed~~; and

executing the particular command[[,]] when the user selects ~~said~~ the captured display image presented in said presenting ~~step~~ step, ~~the command corresponding to the display image.~~

**18. (Withdrawn)** A navigation device for displaying a guide including a map and provided with a navigation command for switching a display format of the map, said navigation device comprising:

a map data storage for previously storing information for generating said map;

a guide section for generating the map displayed in the display format corresponding to said navigation command from the information stored in said map data storage to generate the guide to a destination;

an output section for outputting a display screen including the guide generated by said guide section;

an image capture section for capturing a display image corresponding to said navigation command from said display screen;

a command control information generator for generating command control information including information about the display image captured by said image capture section and said navigation command;

a command control information storage for storing said command control information;

a command presenter for making said output section present said display image corresponding to said command control information stored in said command control information storage so that the user can select the navigation command to be executed; and

a command selector, when the user selects said display image provided by said command presenter, for executing the navigation command corresponding to the display image.

**19. (Withdrawn)** The navigation device according to claim 18, wherein  
said image capture section captures the image of an area selected by the user from said display screen.

**20. (Withdrawn)** The navigation device according to claim 18, wherein  
said image capture section automatically captures all or part of the display screen corresponding to said navigation command according to prescribed conditions.

**21. (Withdrawn)** The navigation device according to claim 20, wherein

said prescribed conditions are determined based on either or both of the number of executions of the command and the number of execution frequencies of the command.

**22. (Withdrawn)** The navigation device according to claim 18 wherein

said display image is a moving picture that varies with time.

**23. (Withdrawn)** A navigation command control method for displaying a guide including a map and executing a navigation command for switching a display format of the map, said method comprising the steps of:

capturing a display image corresponding to said navigation command from a display screen for presenting said guide;

generating command control information including information about said display screen and said navigation command;

presenting the display image corresponding to said command control information so that the user can select the navigation command to be executed; and

executing, when the user selects said display image presented in said presenting step, the navigation command corresponding to the display image.

**24. (Withdrawn)** The navigation command control method according to claim 23, wherein

said image capturing step comprises the steps of:

selecting an image of an area desired by the user from said display screen; and  
capturing said selected image of the area.

**25. (Withdrawn)** The navigation command control method according to claim 24,  
wherein

said image capturing step comprises a step of automatically capturing all or part of the  
display screen corresponding to said navigation command according to prescribed conditions.

**26. (Withdrawn)** The navigation command control method according to claim 25,  
wherein

said prescribed conditions are determined based on either or both of the number of  
executions of said navigation command and the number of execution frequencies of said  
navigation command.

**27. (Withdrawn)** The navigation command control method according to claim 23,  
wherein

said display image is a moving picture that varies with time.

**28. (Withdrawn)** A computer-readable recording medium on which a program is  
recorded, said program making a navigation device for displaying a guide including a map and

provided with a navigation command for switching a display format of the map execute the steps of:

capturing a display image corresponding to said navigation command from a display screen for presenting said guide;

generating command control information including information about said display screen and said navigation command;

presenting the display image corresponding to said command control information so that the user can select the navigation command to be executed; and

executing, when the user selects said display image presented in said presenting step, the navigation command corresponding to the display image.
